WIM SERVICES COMPANY PROFILE

Small Enough To Listen.
Big Enough To Deliver.

WIM
CIVIL & BUILDING ENGINEERS

ABOUT US

WIM Services Limited is a Ugandan-registered multi-disciplinary engineering company delivering reliable, high-quality solutions in road
construction, building construction, and water engineering and supply services.

Established in 2013, WIM Services has grown into a trusted contractor known for technical competence, responsive service, and a strong commitment to quality delivery.

Our company is owned by three shareholders, two of whom are engineering professionals actively involved in day-to-day operations as Managing Director and Technical Director.
Their hands-on leadership, combined with practical industry experience, enables us to maintain high standards across every stage of project delivery.
At WIM Services, we combine the agility and personal attention of a focused firm with the execution capability of a larger contractor. This allows us to respond quickly, work closely with clients, and
deliver practical, cost-conscious solutions without compromising quality.

Founded: 2013
Location: Kampala, Uganda
Core Services: Roads, Buildings, Water Engineering
Approach: Quality, Integrity, Accountability, Service

OUR FOUNDATION

VISION

To be a leading provider of civil and building engineering services and products that consistently meet and exceed customer expectations.

MISSION

To deliver high-quality services and products in roads, water supply, and building engineering in a timely, cost-effective, safe, and healthy working environment.

Core Values

Quality
We are committed to delivering work that meets high professional standards and creates lasting value.

Integrity
We conduct our business with honesty, transparency, and fairness.

Customer Focus
We listen carefully, understand client needs, and respond with practical solutions.

Accountability
We take responsibility for our work, our commitments, and our results.

Teamwork
We believe collaboration leads to stronger performance and better outcomes.

Our Story

WIM Services Limited was born out of experience, resilience, and a bold decision to do things differently.

After facing a professional setback that exposed reliability and integrity gaps within the industry, the founders chose to build a company based on transparency, dependability, and genuine partnership. Rather than being defined by adversity, they turned it into the foundation for something stronger.

Since registration in 2013, WIM Services has grown steadily through discipline, technical delivery, and a commitment to learning from every project. What began with early assignments in school sanitation facilities, classroom blocks, and water infrastructure has evolved into a diversified engineering business serving public, private, development, and institutional clients.

Over the years, our growth has reflected both increasing technical capacity and the trust clients continue to place in our ability to deliver.

Our Milestones

2013 — WIM Services is born
Registered in Kampala on May 20, 2013.

2013 — First contracts
VIP latrines in schools (Busia & Bukwe) under World Vision Uganda, classroom blocks in Bugiri and valley tanks in water-stressed corridors of Nakasongola and Rakai.

2017 — Entered oil and gas space
Total E&PG (Bugungu civil maintenance works?) First contract worth over UGX500m.

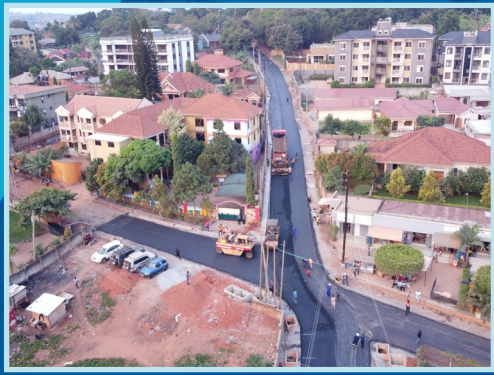
2017 — ISO 9001
ISO certification. This recognition by the International Organization for Standardization validates our commitment to quality, excellence and global standards of delivery.

2018 — First road development project
Buhimba-Bulamagi-Kakumiro Road under China Wu-Yi Ltd.

2020 — State House projects
Presidential initiative for construction of industrial hubs in Kween and Napak, Karamoja sub-region.

2023 — First asphalt road in Namulonge National Agricultural Research Organization (NARO).

2024 / 25 — NAM Roads projects:
Munyonyo UCB rise
KCCA Projects:
Ttula Rd box culvert
Nddull Asphalt placement
Lower Konge



Our Team and Standards

Our strength lies in our people. WIM Services has built a capable team of engineers, project managers, supervisors, technical personnel, support staff, and field teams who work together to deliver projects effectively and responsibly.

We maintain professional standards through disciplined systems, continuous improvement, and compliance with applicable statutory and industry requirements. We also believe that strong project delivery depends not only on technical expertise, but also on teamwork, accountability, and a shared commitment to excellence.

Message from Management

When WIM Services Limited was founded in 2013, the vision was clear:

to build a construction company grounded in purpose, integrity, trust, and technical excellence.

From the beginning, we committed ourselves to giving our very best to every assignment, regardless of project size.

That commitment remains central to who we are today. We believe every project matters because every client matters, and because the infrastructure we build has a direct impact on lives, livelihoods, and communities.

We also believe business should create value beyond the contract itself. That is why we place great importance on fair dealing, timely payment, respectful partnerships, and responsible labour practices.

Our journey has not been without challenges, but those experiences strengthened us. They sharpened our discipline, deepened our resolve, and reinforced the values on which this company was built.

Today, WIM Services stands stronger, more experienced, and more determined than ever to deliver meaningful engineering solutions with excellence and integrity.

"We are building more than projects. We are building trust, opportunity, and long-term value.

Our Services

WIM Services Limited provides integrated engineering solutions across three core sectors:

Road Construction

Construction and rehabilitation of asphalt and gravel roads, drainage systems, culverts, and associated civil works.

Building Construction

Construction, renovation, and remodeling of residential, commercial, and institutional buildings.

Water Engineering and Supply

Design and implementation of piped water systems, purification systems, sewage treatment plants, valley dams, and storage tanks.

We approach each project with a focus on quality, practicality, and value, ensuring that our solutions are responsive to the client's needs and suitable for the environment in which they are delivered.

Road Construction

Road construction is our flagship service and one of our strongest areas of practical capability. We deliver both asphalt and murram road works, supported by a fleet ownership model that strengthens our responsiveness and helps us manage project timelines and costs more effectively.

Our approach to road projects is disciplined and collaborative. We carefully review project requirements around quality, time, and cost, and we work with trusted partners where necessary to ensure smooth execution.
We have delivered road-related works across multiple regions of Uganda, strengthening our ability to operate effectively in urban, peri-urban, and remote environments alike.

Capabilities

Earthworks
Road base and sub-base preparation
Asphalt works
Gravel road construction
Drainage and culverts
Rehabilitation and maintenance

Building Construction

Our building construction services are rooted in the belief that every structure should combine durability, functionality, and value.

Whether the client is developing a private residence, commercial property, or institutional facility, we bring the same commitment to quality planning and disciplined execution. We offer design-and-build, construction-only, renovation, and remodeling services tailored to the client's technical requirements, functional needs, and budget.

By working closely with consultants, suppliers, and project stakeholders, we manage scope, quality, and delivery in a way that supports smooth project completion and long-term performance.

Capabilities

Residential construction
Commercial buildings
Institutional facilities
Renovation and remodeling
Structural and finishing works

Water Engineering and Supply

WIM Services delivers water engineering solutions that improve access to safe, reliable water for communities, institutions, and industry.

Our services include the design and implementation of piped water systems, purification systems, sewage treatment plants, valley dams, and water tanks. We understand that water infrastructure is not only a technical undertaking, but also a social and economic necessity.

For that reason, we approach each project with a focus on sustainability, reliability, and practical usability.
Our experience in this area reflects our commitment to supporting development through infrastructure that meets real needs and creates lasting impact.

Capabilities

Piped water systems
Water purification systems
Sewage treatment plants
Valley dams
Water storage tanks

Project: Water Plant
Kawumu Tannery

Why Choose WIM Services

Hands-on Technical Leadership

Our leadership team remains closely involved in project execution, ensuring Vtimely decisions and practical solutions.

Values-Driven Culture

Integrity, accountability, and fairness are central to the way we work with clients, workers, suppliers, and communities.

Growing Track Record

Our portfolio reflects increasing trust from respected institutions, development organizations, and private clients.

Responsive and Agile Delivery

We are able to move quickly, adapt to project realities, and maintain momentum without losing sight of quality.

Multi-Sector Capability

Our experience across roads, buildings, and water infrastructure allows us to approach projects from a broader engineering perspective.

Long-Term Partnerships

We aim to build lasting relationships through reliability, transparency, and consistent performance.

Professional and Compliance Highlights

ISO certification
UNABCEC membership
PPDA registration
URA compliance
NSSF compliance
URSB registration

These standards reflect our commitment to professionalism, accountability, and responsible service delivery.

Sustainability and Social Responsibility

We believe engineering should create value not only for clients, but also for people and the environment.
We seek to contribute positively to the communities where we work by supporting ethical labour practices, fair wages, worker safety, and respectful engagement with local
stakeholders. Where possible, we also support local
participation in project environments, helping extend the impact of our work beyond the construction site itself.
We recognise our responsibility to future generations and are committed to carrying out our work in ways that
reduce environmental harm and promote responsible
stewardship.

People
Ethical labour practices, worker safety, and responsible engagement.

Communities
Infrastructure that creates meaningful social and economic impact.

Environment
Responsible execution and long-term stewardship.

Clients and Partners

We are proud to have worked with a wide range of public, private, and development-sector clients. Our growing portfolio reflects the confidence that different institutions and organizations have placed in our services.

Our List of Clientele

World Vision Uganda
Kampala Capital City Authority (KCCA)
National Agricultural Research Organization (NARO)
UNHCR
State House
Jibu Water
China Wu-Yi
TotalEnergies-related projects

We value long-term relationships and believe strong partnerships are built through reliability, transparency, and consistent delivery.
